whether they should or not few economists do in fact refrain from making pronouncements on public policy although the state of the economy both here and elsewhere suggests that either the advice given is bad or if good that it is ignored i happen to think that we are appallingly ignorant about many aspects of the working of the economic system the economics of the firm and industry ronald h coase economists and public policy in this volume we attempt to address an element of coase s concern by linking the empirical economics of the finn and industry more closely to macroeconomic policies and to demonstrate how to assess some of the effects of those policies the scope of our study ranges from a structural macroeconomic model of the united states from which macroeconomic effects are propagated to detailed structural models of sic four digit industries the rationale for our approach is very much in the spirit of various integrated macroeconomic industry models constructed by dale jorgenson working with various collaborators our approach is also consistent with and motivated by lawrence klein s agenda of modeling explicitly and structurally the macro and sectoral elements in the national economy we also examine the effects of the macroeconomic policies of different countries on the enterprise in only one case our examination of crowding out of private investment by government deficit fmancing is the linkage among sectors implicit

since the appearance of macroeconomics in the 1940s economists have created many theoretical frameworks to explain the origin and mechanism of economic fluctuations however few of these have managed to gain explanatory power over reality nor can they solve real life problems this book proposes a new macroeconomic paradigm that makes breakthroughs in these areas based on a balance sheet approach and macro financial linkage analysis this book carries out a comprehensive analysis of the trends within china s macroeconomy in 2020 the author argues that the covid 19 pandemic created a great degree of uncertainty therefore supply side structural reform and improved total factor productivity have been promoted to ensure a policy of steady growth given the declining economic growth rate in percentage terms china has needed to adapt to a moderate increase in the leverage ratio while applying more effective fiscal policies to achieve a dynamic balance between stable growth and risk prevention scholars and students of economics and finance especially chinese economics will find this book a useful reference

fundamentally changed the conditions for all macroeconomic policies in this book these macroeconomic policy regimes are discussed on a theoretical level macroeconomic policy regimes in western industrial countries explains how certain countries have created a more liberal and market based type of capitalism the emphasis throughout is on how understanding macroeconomic policies and the institutional framework in which they operate is vital to understanding the long run dynamics of a capitalist economy the policy regimes that are examined consist of changes in the financial system monetary policy fiscal policy wage policy and changes in distribution and foreign economic policy the argument emerges that this deregulated type of capitalism is unacceptably unstable and is only preferable to a minority moving on from the finance driven development of recent decades the authors take a look at the need for fundamental reforms including institutional reforms in the areas of national and international financial and labour markets case studies from the united states the united kingdom germany and japan dating from the 1970s up to today provide the reader with clear examples and analysis of the development in question this book will be of interest to postgraduates and researchers of economics and political science

focusing on the international dimension of macroeconomic policy this handbook covers the main areas of modern macroeconomic policy in open economies the emphasis is on policy applications rather than the development of economic theory there are three basic goals 1 an understanding of how economic theories affect actual policy making 2 a description of the institutional and conceptual development of the international economy and 3 an explanation of the way policy making institutions deal with the so called international economy the handbook consists of an introductory chapter and four parts the first treats macroeconomic policy making from the home country versus the rest of the world perspective the second part stresses policies among interacting and reacting countries the third part considers the development of world capital markets and the international monetary system as important parts of the policy environment the final part details macroeconomic policies in the g7 and latin american countries

subject of this book is the intersection between political science and macroeconomics the central idea is the existence of a political economic equilibrium in which the government acts to dampen the business cycle the election cycle implies that this equilibrium may be a cycle rather than a point an extension of new keynesian theory provides a model of endogenous stabilization in which the government practices short run stabilization policy which dampens the impact of exogenous shocks this is a situation in which rational voters favor discretionary policy over a fixed policy rule even with rational economic agents special attention is given to the relevant data and to the possibilities of hypothesis testing

politicians win elections by promising jobs jobs jobs but in practice these promises quickly fall by the wayside the

goals of macroeconomic policy asks why it begins with the observation that there is no convincing economic argument that full employment should be the primary objective of economic policy in all circumstances in the light of this it examines why policy has failed so consistently it explains this by a theory of the labour market which shows why most workers are happy to operate in a way which militates against full employment it then proceeds to analyse the rather dire consequences of this for the budget deficit

originally published in 1985 Jim Tomlinson charts the route of British macroeconomic policy in the post war era this book argues that the objectives of macroeconomic policy have not been constant that the emphasis has shifted from one item to another over time and that this uncertainty and inconsistency over objectives goes a long way to explaining why macroeconomics management has not been a startling success

John Smithin argues that this financial reaction in macroeconomic policy is the result of a distinct shift in political power in favour of financial or rentier interests and away from both labour and manufacturing business the outcome is a regime in which the real rate of return to financial capital is persistently higher than it was in the relatively prosperous years between the end of world war II and the mid 1970s but economic performance is persistently worse

In this volume world renowned contributors including Martin Ravallion Michael Kremer and Robert Townsend deal with the institutional characteristics of poverty resulting from the time pattern of aid the nature of financial systems and the political economy of budgetary decisions going beyond the traditional literature on poverty this original book deals with themes of broad interest to both scholars and policymakers in a clear yet technically sophisticated manner departing from conventional methods employed in poverty studies these innovative essays enquire into the institutional characteristics of poverty and using current case studies they examine the crucial idea that periods of crises seriously affect poverty

the thesis aims to formulate a theoretical framework which enables us to analyze a country's macroeconomic policy and its impact on the domestic economy and then relate this analytical framework to the case of the philippines this objective of the thesis and hence its contribution was based on the argument that while external shocks during the 1970s were indeed a necessary condition for the occurrence of the philippine crisis during the 1980s the domestic macroeconomic policy also contributed significantly to the economic debacle the thesis answers three central questions the first question focuses on the conduct determination of the philippine macroeconomic policy fiscal monetary and exchange rate policy the second question deals with the impact of domestic fiscal and money expansion under fixed and flexible exchange rates on the real exchange rate the current account employment and output and the third question analyzes the impact of macroeconomic policy on the country's debt investment savings and wealth in response to the first central question we provide an historical and analytical review of the philippine fiscal monetary and exchange rate policy philippine macroeconomic policy during the 1966-1984 period was generally too expansionary which was a departure from the conservative policy during the 1950s and the early 1960s the philippine government has relied heavily on foreign borrowings particularly during the 1970s in order to finance the government budget deficits and the current account deficits the philippines had fixed exchange rate during the 1966-1969 period and then allowed the peso-us dollar rate to float during the post 1970 period the central bank has however intervened in the foreign exchange market in response to the second central question we develop a general theoretical framework in the context of the salter swan tradeable and non tradeable sectoral model the

basic medium run model has three central assumptions namely a a small country assumption b flexibility of the nominal wages to guarantee full employment and c flexibility of non tradeables prices to assure equilibrium in the non tradeables market we also analyze a keynesian short run model incorporating nominal wage rigidity then we analyze the impact of pure money expansion and pure fiscal expansion under fixed and flexible exchange rates on the real exchange rate the ratio of the domestic prices of tradeables to the domestic prices of non tradeables the current account sectoral employment and output we are able to come up with alternative estimates of the domestic prices of tradeables domestic prices of non tradeables and the real exchange rates based on three alternative classifications of the tradeable sector and the nontradeable sector we are also able to come up with alternative estimates of sectoral employment and sectoral output factual evidence in the form of casual observations and some econometric work enabled us to confirm and conclude the relevance of the salter swan theoretical framework in analyzing the effects of fiscal and monetary policy in the philippines under fixed and flexible exchange rates there also existed a significant relationship between the current account balance and the real exchange rate in the philippines the real exchange rate depreciated and the current account balance showed an improvement during the 1967 1973 period and subsequently until 1984 the real exchange rate appreciated and the current account balance deteriorated such a significant relationship was attributed to the linkage between changes in the real exchange rates and the exogenous changes in fiscal and monetary policy and to the linkage between changes in the real exchange rate and changes in the terms of trade employment and output trends showed consistency with the expected theoretical results non tradeable output increased while tradeable output decreased during the post 1973 period since the price of non tradeables increased relative to tradeables and non tradeable employment increased while tradeable employment decreased during the same period presumably owing to the lower product wage of the non tradeable sector relative to the product wage of the tradeable sector in answer to the third central question we develop a framework of analysis to explain each of the observed phenomena namely rising gross external debt widening investment savings gap and increasing real wealth of the philippines we are able to come up with estimations or measures of the economic variables under investigation we concluded that the financing of the current account deficits accounted for about two thirds of the rise in the cumulative external debt of the philippines during the 1971 1984 period and the financing of private capital outflows accounted for about onethird the public sector deficit accounted for a larger share in the widening of the national investment savings gap and the private sector deficit accounted for a smaller share the growth of capital stock exceeded the growth of net external debt

and hence real savings were positive real wealth appears to have been increasing and that the philippine debt problem is a liquidity problem which will be self financing if the investments undertaken turn out to have been profitable

the purpose of this paper is to assess macroeconomic policy and the role of the state in light of the experiences in the 50 years since keynesian ideas were broadly applied the changing structure of the world economy and the advance of economic ideas we shall not confine ourselves to the traditional narrow concerns of macroeconomic analysis i e demand management and monetary and fiscal policy in the short run institutions will play a central role in this analysis subscribe to publications email alerts
